"It is regrettable that school librarians say that science teachers make far less use of the library facilities than their colleagues in English and social studies; but it is gratifying that science stands practically at the top of the list of students' preferences when it comes to browsing or reading just for fun." *The Phi Delta Kappan*, October, 1951.

BACK NUMBERS

Most issues of the American Biology Teacher, except those of 1938–39 and 1939–40, are available.

For information write

JOHN P. HARROLD,
110 East Hines St.,
Midland, Mich.

NOTICE TO CONTRIBUTORS

Manuscripts for publication in THE AMERICAN BIOLOGY TEACHER should be typewritten, on one side only, on standard white paper, 8½ × 11 inch size, with a margin of at least an inch on all sides. The writer should keep a carbon copy for reference and as insurance against loss of the original in transit.

Articles are scheduled for publication in approximately the order of acceptance of the manuscripts. Generally the journal is tentatively arranged about three or four issues ahead, and there are under consideration at any time enough manuscripts for about two or three more issues. Some space is of course allowed for news items and articles of a seasonal nature. Many seasonal papers have to be postponed an entire year, simply because the author has not allowed the necessary four to six months that intervenes between acceptance and publication.

For details concerning titling, headings, references, illustration, etc., consult *Preparation of Manuscripts for Publication*, which appeared in the November, 1949, issue of THE AMERICAN BIOLOGY TEACHER. A limited number of reprints is available; copies may be obtained from the editor or from the Secretary-Treasurer.

Manuscripts may be sent to the editor-in-chief, assistant editor, or to any one of the associate editors. A complete list of the latter appears in each November and March issue.
